

Intramurals Database

The purpose of this dataset is to optimize an intramural database that college's use for their on-campus intramural sports! This relational database schema is meticulously designed to facilitate the management of intramural sports activities within an educational institution. It encompasses key entities such as leagues, teams, players, matches, seasons, and sports. The relationships between leagues and matches, players and teams, and sports and seasons are established through foreign keys. In summary, this database schema serves as a structured backbone for efficiently organizing, tracking, and analyzing intramural sports data, offering a comprehensive solution for educational institutions looking to enhance their recreational sports management.
